

SPIRALTOP C

Design Description

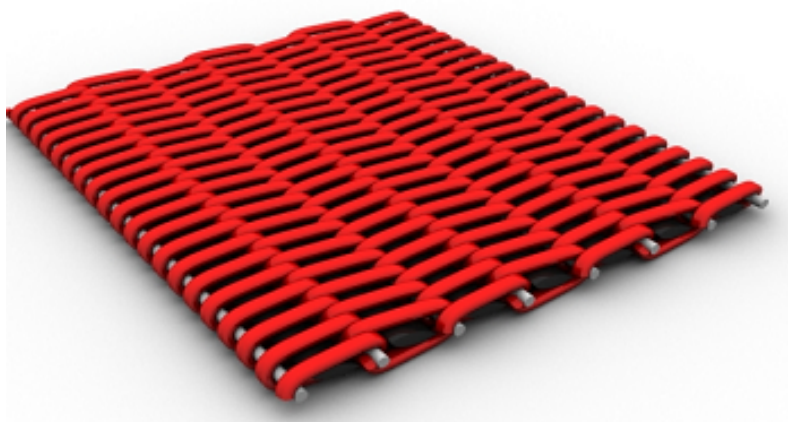

SPIRALTOP C is an anti-contaminant polyester spiral construction designed for mark sensitive applications. This low caliper, flat coil design provides excellent surface contact and smoothness. The planar, seamless structure offers great wear resistance. This design runs clean and maintains air permeability throughout life.

Features:

- Contaminant resistant polyester monofilament
- No conventional seam – uniform throughout the entire fabric
- Wide permeability range available
- Flat monofilament coil construction
- Low caliper
- Multi-seam option available

Benefits:

- Spiral construction with anti-contaminant material runs cleaner
- Smooth, non-marking seamless surface
- High surface contact area for improved heat transfer
- Compatible with sheet break detection equipment.
- Increased air movement for improved drying
- Damage, abrasion resistant
- Lower inventory required with multi-seam option

Technical Specifications

Application:	Conventional Top & Bottom
Permeability (CFM):	200, 300, 500, 800
Caliper:	0.072- 0.075" (1.83-1.90 mm)
Material:	Anti-Contaminant Polyester (PET) Flat coil construction
Seam:	Seamless
